隨1:

ANS>

悟空會根據平均成本(AC)曲線與 需求曲線(D)的 友矣訂出(PL,QL)的價量组合。悟能會根據MR=O 決定出Qc的產量,並將價格訂在Pc。悟淨會根據MR=MC 決定出QM的產量,並將價格定為PM。

2 Max TR = MR = 0

Max To = MR(00 - MC(Q) = 0 MR=MC

难2:

題→設獨占廠商在均衡下,價格是辺際成本的4倍,我均衡時之需求彈性.

$$ANS \rightarrow MR = P[1 - \frac{1}{E^d}]$$
 PERT
 $MR = 4MC[1 - \frac{1}{E^d}]$
 $MC = 4MC[1 - \frac{1}{E^d}]$
 $E^d = \frac{4}{3}$

$$L = \frac{P - \frac{1}{4}P}{P} = \frac{\frac{3}{4}P}{P} = \frac{3}{4}$$

L= 181 , L的倒权為需求3單性
